Overview

The Liver Transplant Hospital was built on a 3,210 m² site and has a total enclosed area of 20,500 m². The six-storey building stands 20 metres southeast of the main Turgut Ozal Medical Center building and is connected to it by two enclosed passageways.

- The ground floor contains laboratories, classrooms, seminar rooms, archives, laundry, air-conditioning and technical service departments.
- Outpatient clinics, radiology, the ERCP unit and ambulatory services are also on the ground floor.
- The first, second and third floors each contain two 31-bed wards, a 12-bed intensive care unit and a meeting room.
- The fourth floor contains operating rooms, meeting rooms, offices and a 70-seat dining hall.
- The hospital also includes a conference hall, library, study room and three social areas.

For Our Patients

- 5 outpatient clinic rooms
- 12 operating rooms
- 3 intensive care units with 36 beds
- 7 inpatient wards with 116 beds
- Radiology unit
- Gastroenterology and ERCP unit

OUR STORY

Inonu University's liver transplant program at Turgut Ozal Medical Center began in 2002. As organ-donation shortages and the number of patients waiting for transplantation increased, the need for living-donor liver transplantation became clear. Our first living-donor liver transplant was performed in September 2005.

Our program continued to grow. Between 2008 and 2016, the center ranked among the leading liver transplant centers in Türkiye and Europe and became one of the world's notable centers.

The Liver Transplant Institute, founded in 2011, was the first of its kind in the world. The Institute provides liver-transplant education to physicians from many countries and is equipped to deliver advanced care in line with European and international standards.

OUTPATIENT CLINICS

Five outpatient clinics provide preoperative preparation and periodic postoperative follow-up. Transplant surgeons, gastroenterologists, pediatric gastroenterologists and infectious-disease specialists work together in patient care.

OPERATING ROOMS

The hospital has 12 operating rooms and a meeting room, equipped with modern devices and technology.

INTENSIVE CARE UNITS

Three intensive care units provide a total of 36 beds. Designed for tertiary and advanced care, the units are arranged as single-patient rooms.

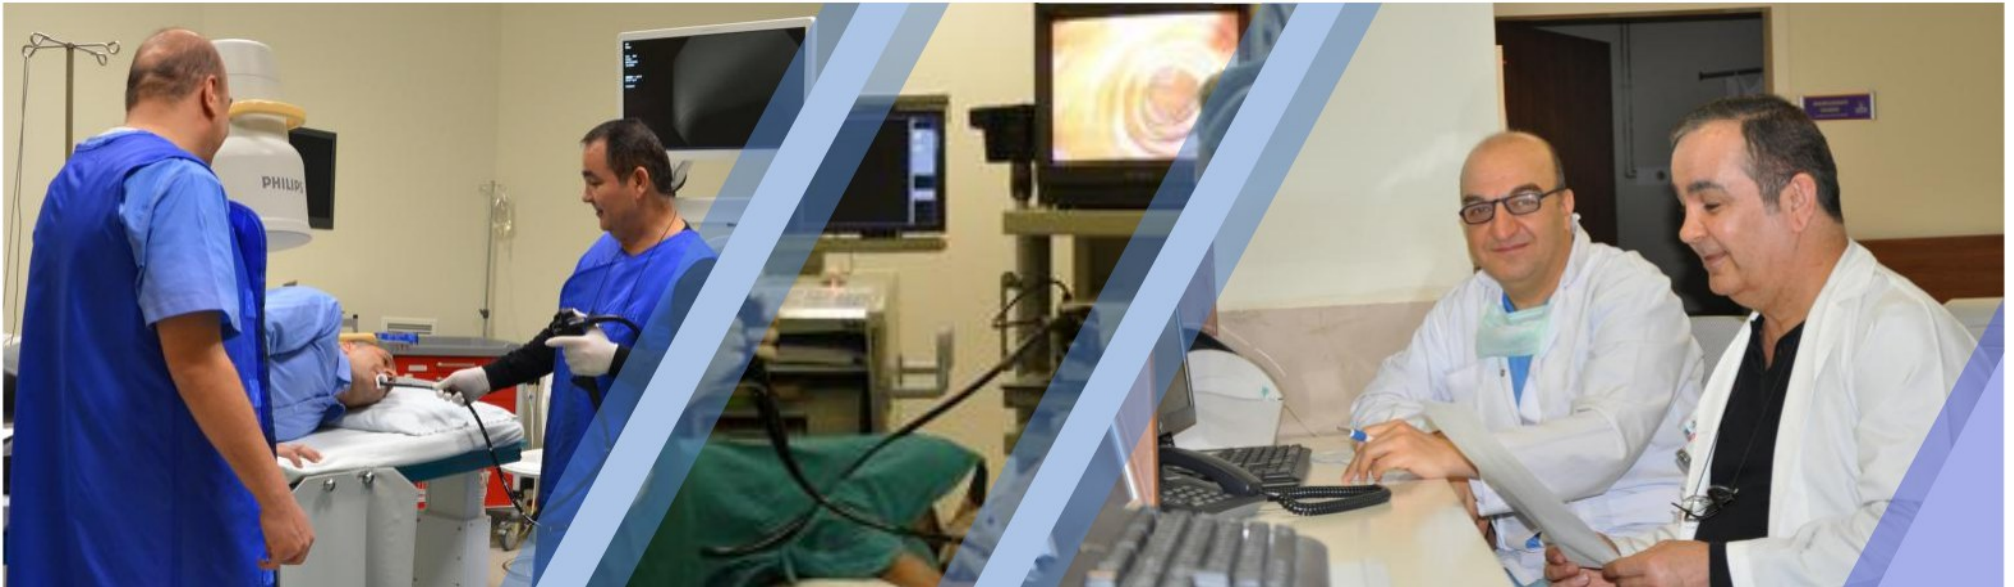

INPATIENT WARDS

Seven inpatient wards provide 116 beds. Each patient has a single room with an average area of 30 m². Rooms include a nurse-call system, telephone, television and satellite service, refrigerator, toilet, shower, wardrobes and storage, and a companion bed.

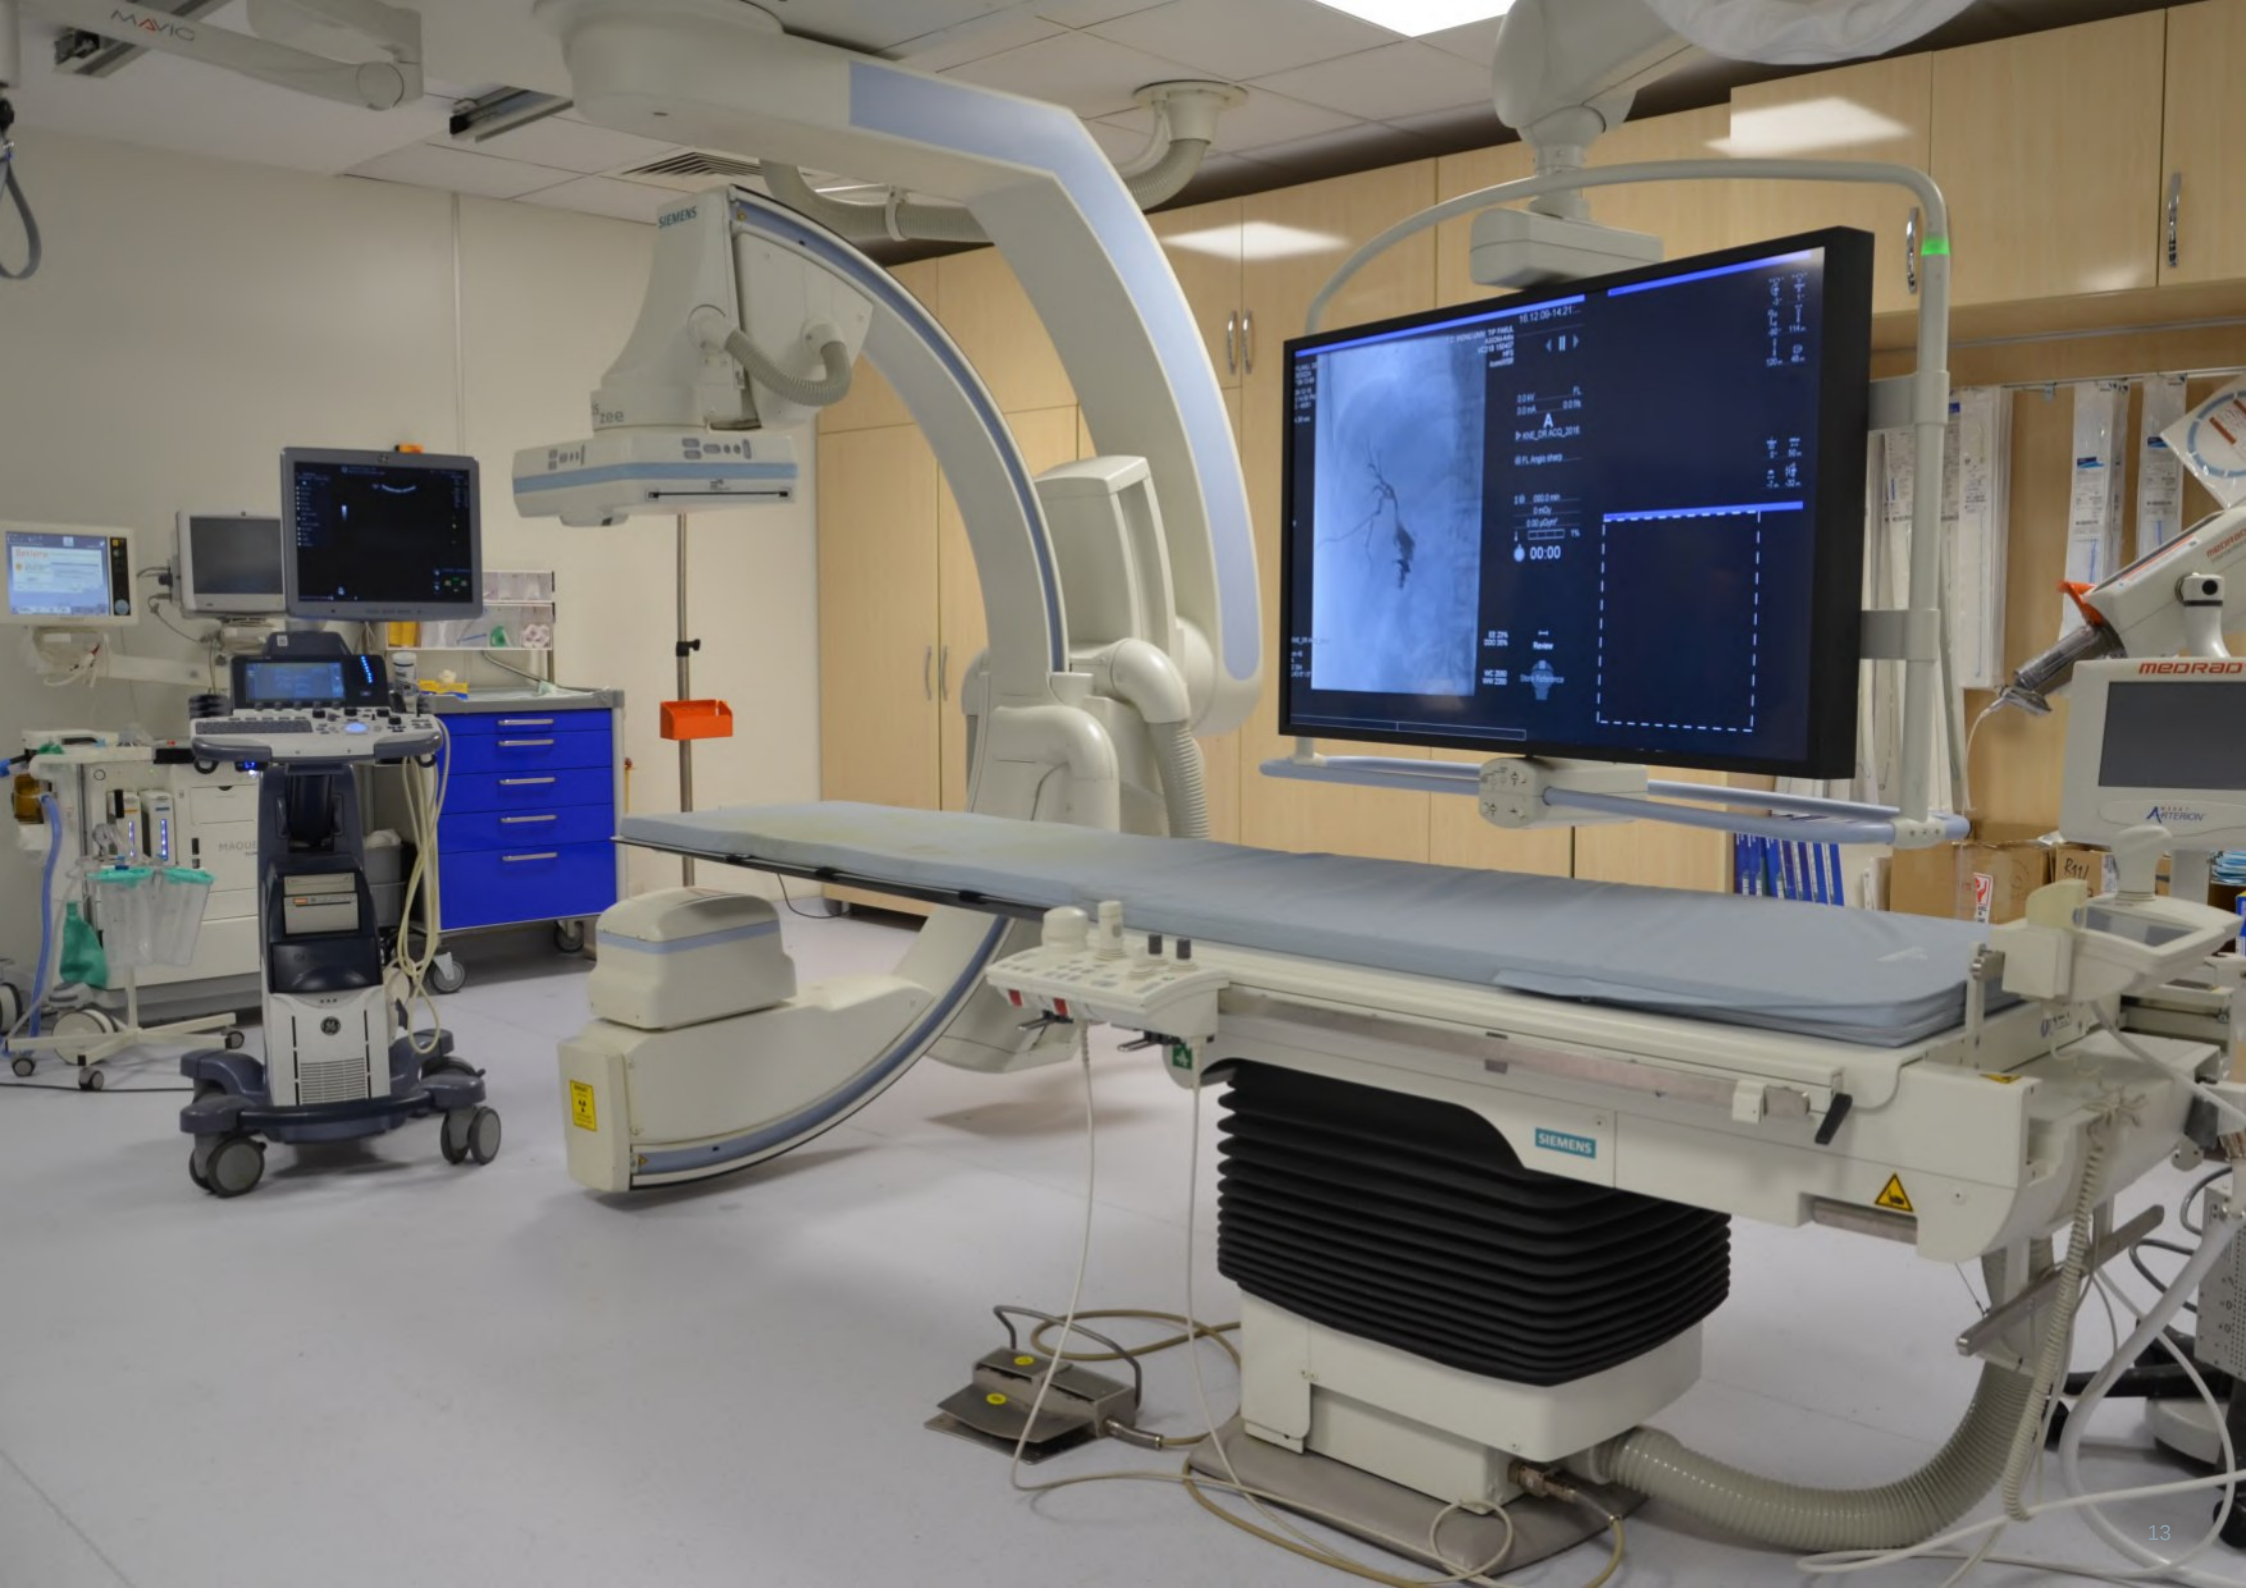

RADIOLOGY AND ERCP

The hospital has dedicated interventional radiology and gastroenterology/ERCP units where radiologic and endoscopic procedures are performed. These services are available whenever patients need them, at any time of day.

LABORATORIES

The Liver Transplant Institute has two research laboratories. Comprehensive projects for graduate and doctoral students are conducted in the immunology and hepatology research laboratories.

CLASSROOMS

Two 100-seat classrooms are used for teaching medical and graduate students and research staff, and for transplantation and biliary-vascular council meetings. Three additional 10-seat meeting rooms are also available.
